Zexa Platinum Machine Wash - Dishwashers

Zexa Platinum Machine Wash is designed for automatic feed undercounter commercial dishwashers and crate washers. Specifically formulated for hard water areas, it performs as a highly effective sanitising and disinfecting detergent.

Description:

Zexa Platinum Machine Wash Detergent works by penetrating soils and breaking the bonds with the surface of the wares, allowing the water volume to wash the soil away.

This product is highly effective at removing protein-based soils (milk, cream, egg, etc.). This product also keeps soil in suspension in the wash tank and reduces the risk of scale build up. Once in the drain system the product will prevent smells and drain blockages.

This product is dispensed at an approximate rate of 1.5mL per litre of water consumed in the rinse cycle. It is only recommended for use in automatic dispenser machines.

Applications:

- Automatic feed undercounter washers.
- Crate washers.
- Sanitiser detergent.
- Disinfectant detergent.

Sizes:

- 5lt Containers
- 15lt Containers
